PROFESSIONAL SUMMARY

Mohamed Ragheb Omer is a **Full-Stack .NET Developer** specializing in building **scalable, maintainable, and production-oriented** web applications using **C#, ASP.NET Core, SQL Server, Entity Framework Core, React.js, and modern web technologies**. His expertise encompasses robust **API design, clean architecture, secure data access, responsive UI development**, and **scalable** full-stack solutions.

TECHNICAL SKILLS

Backend Skills

Languages: C#, T-SQL

Frameworks & Libraries: ASP.NET Core Web API, Entity Framework Core (EF Core), ADO.NET

Architecture & Design: Clean Architecture, Repository Pattern, Unit of Work (UoW), Dependency Injection (DI), Middleware Pipeline, SOLID Principles

API & Security: RESTful API Design, JWT Authentication, Role-Based Authorization, Resource-Based Authorization

Databases & Caching: SQL Server, Redis Caching, Stored Procedures, Transactions, Triggers, Database Design, Indexing

Frontend Skills

Languages: HTML, CSS, JavaScript (JS), TypeScript (TS)

Libraries & UI Tools: React, Tailwind CSS, Material UI (MUI)

Additional Skills

API Testing: Swagger / OpenAPI, Postman

Testing: Unit Testing, Integration Testing, xUnit, Moq, FluentAssertions

DevOps & Tools: Docker, Azure, GitHub Actions, CI/CD, Git, GitHub, Visual Studio, Visual Studio Code

Soft Skills: Problem Solving, Analytical Thinking, Self-Directed Learning, Attention to Detail, Team Collaboration

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Web Developer

Jul 2026 – Present

- Developed scalable **full-stack web applications** using **ASP.NET Core, React.js, TypeScript, SQL Server, and RESTful APIs**, aligning technical solutions with business requirements.
- Engineered maintainable **backend architectures** using **Clean Architecture, SOLID principles, Entity Framework Core, ADO.NET, Repository, and Unit of Work patterns**.
- Implemented **secure authentication and authorization** using **JWT, role-based access control, and resource-based authorization** to protect application workflows and data.
- Built **responsive, component-driven** user interfaces with **React.js and TypeScript**, integrating frontend components with reliable and **well-structured backend services**.
- Applied **testing, structured logging, exception handling, dependency injection, and performance-conscious development** practices to deliver **reliable and maintainable software**.

SELECTED PROJECTS

Dental Clinic Management System

Jul 2026 – Aug 2026 | Demo: youtube.com/watch?v=ObpU8mq26vk

Tech Stack: C# · ASP.NET Core · Clean Architecture · DDD · Repository Pattern · SQLite · Entity Framework Core · Serilog

A comprehensive dental clinic management system developed to streamline daily clinic operations. The application manages patients, appointments, visits, treatments, prescriptions, payments, and radiographs through an intuitive desktop interface.

- Architected and implemented a scalable backend architecture using **Clean Architecture**, **Domain-Driven Design (DDD)**, and the **Repository Pattern** to ensure maintainability and separation of concerns.
- Built and integrated end-to-end business workflows, including patient records, appointments, treatments, billing, prescriptions, and radiograph management, backed by a relational **SQLite** database with **10+ interconnected tables** using **Entity Framework Core**.
- Collaborated directly with the client throughout the development lifecycle, translating business requirements into production-ready features and delivering a reliable solution for daily clinical operations.

SMS — Supermarket Management System

Feb 2026 – May 2026 | github.com/MohamedRaghebOmer/SMS-Supermarket-Management-System

Tech Stack: ASP.NET Core Web API · Clean Architecture · JWT Authentication · ADO.NET · SQL Server

A **RESTful** supermarket management system built using **ASP.NET Core Web API** and **Clean Architecture**, featuring secure **authentication and authorization**, optimized data access, and a scalable architecture for managing core supermarket operations.

- Designed and implemented a layered **RESTful Web API** using **ASP.NET Core** and **Clean Architecture**, ensuring scalability, maintainability, and separation of concerns.
- Implemented **JWT Authentication**, **resource-based authorization**, and a high-performance data access layer using **ADO.NET** and **SQL Server**, supporting **3+ user roles**, **20+ relational tables**, and **140+ stored procedures**.
- Built a centralized request processing pipeline with **3+ custom ASP.NET Core middleware** components for **exception handling**, **audit logging**, **correlation ID tracking**, and request processing.

DVLD — Driving & Vehicle License Department

Dec 2025 – Feb 2026 | github.com/MohamedRaghebOmer/DVLD-Driving-Vehicle-License-Department

Tech Stack: WinForms · C# · .NET Framework 4.8 · SQL Server

A desktop Driving & Vehicle License Department management system developed to automate the complete license issuance lifecycle, including applicant registration, testing, license management, and financial transaction tracking.

- Designed and implemented a relational **SQL Server database** with **14 interconnected tables**, supporting applicants, licenses, tests, applications, and financial transactions while maintaining data integrity.
- Developed a **multi-stage licensing** workflow that enforced **sequential vision, theory, and practical tests**, with eligibility validation and business rules preventing invalid or duplicate applications.
- Built **end-to-end license lifecycle management**, including **issuance, renewal, reissuance, and payment tracking**, providing complete auditability of applications and financial records.

CERTIFICATIONS

- ASP.NET Core Web API — Programming Advices (Certificate of Completion)
- React.js Development — Tarmeez Academy (Certificate of Completion)
- Entity Framework Core — Programming Advices (Certificate of Completion)
- SQL Server & T-SQL — Programming Advices (Certificate of Completion)

Additional Professional Development: **Completed the comprehensive Programming Advices roadmap (29+ courses), covering programming foundations, algorithms, object-oriented programming, C++, C#, .NET, SQL Server, Git, GitHub, and backend development.**

EDUCATION

Bachelor of Science in Computer Science — East Port Said National University | East Port Said, Egypt

Oct 2025 – Oct 2029 (Expected) | Current **GPA: 2.98 / 4.00**
